

Introducing Silhouette Soft®

The thread lift to transform
your patients' confidence.

Models are not actual patients.

 SILHOUETTE SOFT®

What is Silhouette Soft?

Silhouette Soft is a highly effective thread lift that can be used to reposition the skin tissue in the midface, jawline, eyebrow and neck. It corrects skin laxity, so you can help your patients treat the visible signs of ageing.

Resorbable PLLA threads – with patented bidirectional cone technology – empower you to correct and tighten the tissues, restoring a more youthful face shape.

As well as instant lift and enhanced contours, Silhouette Soft provides gradual and sustained tissue regeneration, stimulating the body's natural collagen production, for longer lasting results. Over time, skin becomes rejuvenated and more youthful looking from within.

Safe,¹ minimally-invasive and beautifully effective, Silhouette Soft is the treatment that reshapes your patients' confidence.

Choose convenience and confidence

Ideal for busy lives, Silhouette Soft is an outpatient procedure that you can perform in under an hour using just local anaesthesia. There's minimal downtime, and most people return to normal activities the next day.¹

Better yet, Silhouette Soft is long-lasting, with results for up to 24 months.² It also has a reassuring safety record with a low adverse reaction rate. Close to 300,000 treatments have been performed so far, in more than 70 countries.³ Patients love the combination of stunning results with minimal pain and inconvenience.

Silhouette Soft is available in four different variants so you have the freedom and flexibility to work in different areas and address different laxity concerns.

Introducing the new 12-cone short suture

More cones per cm, more control, more beautiful results.

The new 12-cones short suture provides the ideal dimensions and tension for treatment of the marionette line-to-temple vector – one of the most challenging corrections. Thanks to a higher cone concentration, the suspending force is distributed across more engagement points, reducing the force per point.

Developed following clinician feedback, this world-first is now available to you. To find out more about this technological advancement, visit silhouette-soft.com

Don't forget that the active length of the device is the important factor. The option with the most appropriate length with respect to the intended treatment area should always be chosen. Our new insertion patterns provide fully updated guidelines on each face area, respecting the skin laxity of the patient.

How to use Silhouette Soft

The extended Silhouette Soft portfolio is supported with exciting new in-clinic consultation tools and insertion patterns, which have been developed by leading experts to create tailor-made solutions for all levels of laxity.

The treatment process is streamlined and efficient when you make the most of the Silhouette Soft resources we provide – just five clear steps to beautiful results.

For full access to all our tools and detailed technical guidance to help you use Silhouette Soft to transform your patients' appearance and confidence, speak to one of our Sales Representatives.

Step 1: Evaluate your patients' skin using the Silhouette Soft Laxity Scale.

Step 2: Assess their skin condition to determine Mild, Moderate or Severe laxity.

Step 3: Identify the recommended insertion pattern(s).

Step 4: Use one of our Silhouette Soft Rulers (for Mild or Moderate laxity) for measuring before the procedure.

Step 5: Follow our new expertly-developed insertion patterns and planning guidelines.

Model is not an actual patient.

Upgrade your offer

Silhouette Soft is a premium patented thread lift product – available to carefully selected customers by Sinclair – so working with us brings prestige as well as access to exclusive services and benefits.

It combines beautifully with other procedures including fillers, botulinum neurotoxin injections and EBD treatment plans⁴ – creating a sustainable, buildable income stream.

Supporting you and your business

As well as offering a safe¹ and effective thread lift, Silhouette Soft brings additional benefits to your business. Sinclair offers training and ongoing support, so you can give patients unparalleled results with the highest safety standards. It's all about investing in your success – as a clinician and as a business – because when you achieve great things, we all grow and thrive.

Allow sufficient healing between treatments for combination use.

Silhouette Soft® is a resorbable sterile implantable single-use device intended to be used in adult patients for facial and neck reconstruction in the treatment of facial morphological asymmetry and ptosis, including but not limited to:

- The effects of facial ptosis or paralysis (e.g. Bell's palsy, benign or malignant tumours, iatrogenic injury, Varicella-zoster virus associated facial palsy, trauma, and congenital palsy).
- Morphological asymmetry (e.g. congenital anomalies, trauma to the face or the temporomandibular joint).

Adverse effects: Like all procedures of this type there is a possibility of adverse events, although not everybody experiences them. These adverse events include infection, minimal acute inflammatory tissue reaction, pain (which may be temporary or persistent in nature), swelling and oedema, transient haematoma or bruising and transient rippling or dimple formation. Other potential adverse events include ecchymosis, sensory/motor nerve injury, asymmetry, banding, thread migrations and palpable thread ends/knots. Material sensitivity/allergic reactions in patients following surgery may occur. The onset of any adverse event must be reported immediately. Please contact the local Sinclair representative or authorised Silhouette distributor. Alternatively send the details to quality@sinclairpharma.com
