

# SKINPEN® FREQUENTLY ASKED QUESTIONS:

## What is SkinPen?

SkinPen by Crown Aesthetics is a transient, non-surgical, micro-needling device for the creation of “micro” skin punctures or channels to improve the appearance of the skin. SkinPen is an automated mechanical microneedling technology device designed for use by medical professionals. Sterile microneedle cartridges are provided for single use only.

## How does SkinPen work?

Microneedling allows for controlled induction of the skin’s self-repair process by creating precise, micro injuries in the skin.

## What are the benefits?

SkinPen procedures are beneficial to assist in reducing the signs of aging, improving the appearance of acne scars, as well as rejuvenate aging skin and conditions like melasma and surgical scars.

## Who is a candidate?

One of the most exciting things about SkinPen is that it can be used on all skin types year- round.

## What areas of the body can it be used for?

SkinPen’s variable needle depth allows for versatility and therefore it can be used on many parts of the body, including the face, neck, and décolleté. The depth for the face, neck and décolleté will not be deeper than 1.5MM and the body could go up to 2.5MM.

## How long does the procedure take and will it hurt?

The procedure typically takes around 30 minutes for a face. Most SkinPen users apply a topical anesthetic to the skin prior to the procedure. This allows for a comfortable experience.

## What is the downtime and what side effects should I expect?

\*

The total healing time depends on each individual patient. Most patients have some slight swelling and redness/pinkness (like a mild sunburn) for 24- 48 hours days. Some patients may heal completely in 24 hours.

## When will I see results?\*

Patients may notice healthier looking skin immediately. However, the natural repair process of your own skin continues to progress over the course of several weeks. Damage that has occurred over an extensive period of time won’t disappear immediately. You may not see the final result for up to 6 months following your final session.

## How many procedures are recommended?\*

The number of procedures required will be determined by your skincare professional based upon your individual procedure goals and the health of your skin. We recommend a minimum of 3 procedures spaced about 4 weeks apart. Your provider will develop a procedure plan specific to your needs and a maintenance plan to help maintain the rejuvenating effects. However, on scar tissue we will recommend a minimum of 6 treatments.

## Can I wear make-up immediately following a procedure?\*

Patients typically can resume their normal makeup regimen after the first 24 hours following their SkinPen® procedure depending on the area and type of procedure performed. Let the microchannels close- up within 18 hours.

## Can I get a SkinPen procedure if I’m pregnant?

SkinPen is not recommended for women who are pregnant or nursing.

## Is there anyone who should not use SkinPen®?

SkinPen users should take precaution when determining whether the SkinPen procedure is right for them. Consult your provider to discuss whether SkinPen is right for you.

\*Individual results will vary.
